

EAS Geospatial Application Development

Putting your data on the map

Since 2011, the EAS Geospatial Application Development Program has specialized in integrating geospatial technologies into mission-focused web applications. We specialize in building quality products and excellent customer relationships.

We understand federal agencies and government requirements and streamline the process to get your project started quickly. We keep up with industry best practices and technologies so you don't have to. As a part of USDA, our interest is in strong partnerships and your success, not in profits or growth.

GEOSPATIAL SERVICES

- Enterprise web map services
- Map Application development and integration
- Spatial analytics, geospatial data modeling and management
- Custom web geospatial tools
- Integration of COTS solutions
